

Save money, save time, never run out of gas when you

Cut With Hi-Pressure Natural Gas

Auto repair shops can cut fuel gas costs, improve safety and be more productive with a G-TEC Natural Gas Torch Booster

Hundreds of leading muffler and auto repair shops in the US and Canada rely on G-TEC Torch Boosters including Midas, Meineke Cole/Mavis, Car-X, Speedy and many independent shops!

A G-TEC Torch Booster is ready to use as soon as it is turned on. It never runs out of gas and eliminates the need to exchange and change empty cylinders.

Keep the torch handles you already use and change the tip to a natural gas tip, and we have the right tip for every torch.

A G-TEC Torch Booster connects to your building's utility natural gas service then raises pressure for high performance torch cutting and significant savings compared to acetylene, propane and other cylinder gases.

Natural Gas Saves Money

Natural gas saves up to 90% compared to acetylene and 50% compared to propane for equal heat performance

Save more money by eliminating cylinder rental and pickup/deliver charges

Pay for natural gas after you use it, not when it is delivered

G-TEC Torch Boosters Save Time

No need to order, store, move and change fuel gas cylinders - don't waste productive time

Natural Gas Is The Safest Fuel Gas

Make your shop safer by eliminating cylinder gas storage

Natural gas is lighter than air so leaks rise and dissipate

Natural gas can be used at withdrawal pressures greater than 15 psi

A G-TEC Torch Booster Is Easy To Use

Turn the Torch Booster ON in the morning and OFF at the end of the day - no operator attention or adjustments are needed during the day

Torch Booster automatically adjusts to gas flow required by the torches, even when no torches are being used

Torch Boosters are quiet and do not require ventilation or other special site preparation

Listen To What Auto Repair Shop Owners Say...

I recommend it, its cheaper, has good heat, and you don't have to change cylinders"
- Bristol, CT

No problems, one of the more reliable items I have in the shop
- New Milford, CT

I pay \$ 12 per month for natural gas compared to \$ 350 per month for acetylene
- Denver, CO

Designed to International Standards

G-TEC Torch Boosters are designed and manufactured for performance, reliability and safety to International Standards. They are welcomed in all buildings in North America, even places where cylinders of acetylene or propane are prohibited.
